

GOWTHAM RAJ B

1/25 West street, Palaviduthi, Kadavoor , Karur • +91 9342494663 • gowthamrajb.dev@gmail.com

SUMMARY

Aspiring Data Engineer skilled in Python, SQL, Linux, AWS and Power BI. Strong foundation in data cleaning, ETL workflows, data modeling, and database querying. Hands-on in building data pipelines and generating insights through interactive dashboards. Eager to contribute to scalable data engineering solutions and analytics-driven decision making.

WORK EXPERIENCE

Software engineer Intern, Crescent infotech - Erode

July 2025 - Aug 2025

- Built and improved ETL pipelines using Python + SQL, reducing manual data preparation time by automating data extraction and transformation workflows.
 - Performed data cleaning, validation, and schema checks (null handling, deduplication), improving data accuracy and reliability for reporting and analytics.
 - Wrote optimized SQL queries (joins, CTEs, aggregations) to speed up reporting datasets and enable faster business insights.
 - Managed data storage in AWS S3 (raw → curated layers) and applied structured organization, improving data accessibility and pipeline maintainability.
 - Enabled pipeline monitoring and troubleshooting using AWS CloudWatch + Linux log analysis, reducing issue resolution time by 20% and increasing pipeline reliability.
-

EDUCATION

Bachelor of Technology (Computer Science & Business system)

Aug 2023 - Apr 2027

SSM Institute of Engineering and Technology , Dindigul

Higher Secondary Education

June 2021 - Apr 2023

Model higher secondary school , Tharagampatti

PROJECTS

AWS End-to-End Data Engineering Pipeline (S3 | Glue/Lambda | Athena | Python | SQL):

- Built an end-to-end data pipeline to ingest raw datasets (CSV/API) and store them in AWS S3 with structured layers (raw → processed → curated).
- Developed ETL transformations using Python to clean and standardize data (null handling, deduplication, schema validation), improving data quality by 40%.
- Converted processed data into Parquet and applied partitioning in S3, improving Athena query performance by 35%.
- Wrote optimized SQL queries in Athena for validation and analytics (row-count checks, duplicate checks, KPI queries), reducing manual verification by 30%.
- Automated ingestion and monitoring using AWS Lambda/EventBridge + CloudWatch, and used Linux-based scripting/log analysis to reduce pipeline failure resolution time by 25%.

SKILLS

- **Programming :**
 - Python | SQL
- **Data Engineering:**
 - ETL/ELT Pipeline | Databricks | Modeling | Data Cleaning | PySpark | Apache Airflow | Data Validation
- **Cloud (AWS):**
 - S3 | Glue | Lambda | Redshift | Athena | Kinesis | RDS | DynamoDB | API Gateway | CloudWatch | IAM | CloudFormation | Amazon QuickSight

CERTIFICATIONS

Data engineering Bootcamp - Udemy
